Allowable Subject Matter

1. Claims 22-25, 30-32, 35-39, 44-46 and 49-68 are allowed.
2. The following is an examiner's statement of reasons for allowance:
 - a. Applicant provides a system for removing one or more selected segments of a digital signal stream that represents an assembly of information-bearing sounds (ISA), including but not limited to music and one or more human voices, to produce a remainder data file (referred to as a reduced data file, or ISDF), having one or more components, after decimation of the ISA by removal of the PPC(s). Applicant's invention is novel and innovative in the sense that it divides the digital sound file into first and second data files, wherein the first data file comprising the digital sound file having at least one segment removed from each of a plurality of locations within the digital sound file, and the second data file comprising the segments removed from each of a plurality of locations within the digital sound file. The invention further encrypting at least a portion of the first data file using an encryption key; communicating to the electronic device for persistent storage on the electronic device, a selected one of the first data file and the second data file; and communicating to another electronic device for delivery to the electronic device, the unselected one of the first and second data files, the delivery to the electronic device from the other electronic device being through a selected one of a) a removable storage medium and b) a data stream via a communications network. REITMEIER, the closest prior art teaches a method and apparatus for securing and, optionally, distributing an information stream by divided the information stream into a collection of segments and

compressing the segments, rearranging the order of the segments and encrypting the segments prior to, e.g., distributing the encrypted segments to one or more users within an information distribution system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

b. Daniels (U.S. PG Pub No. 2005/0188409) *teaches an event-recording device records an event on a recording medium. At least one edit-record interval is selected during the recording of the event corresponding to a respective selected portion of the recorded event. A start-record signal is generated dependent on each selected edit-record interval. Each start-signal is recorded on the recording medium along with the recorded event. During a subsequent edit-recording operation each start-record signal is detected from the recording medium, and a playback device and an edited-recording device are controlled during the edit-recording operation so that a play-back operation to play-back the event from the recording medium is performed by the playback device and a record*

operation to record an edited version of the event is performed by the edited-recording means depending on each detected start-record signal to automatically edit and record a copy of the recorded event having each selected edit-record interval, without including the unselected portions of the recorded event.
